Portal Layout Skeleton

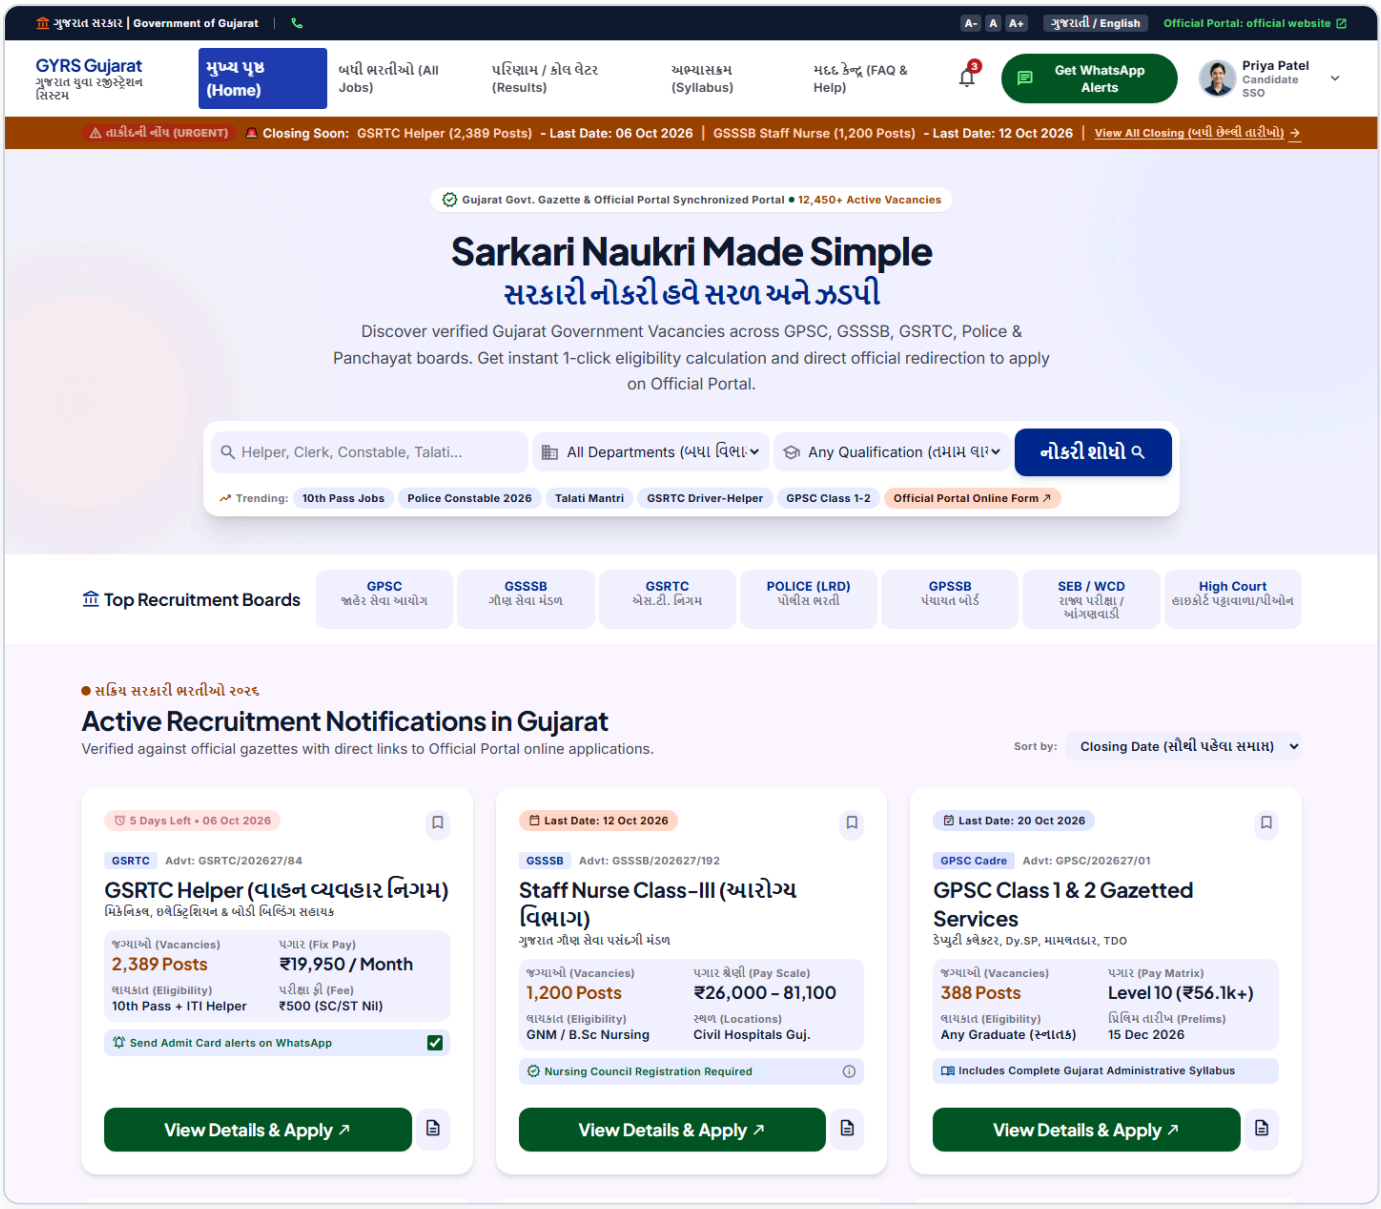

Structural blueprint behind every screen in this document. The global shell (sticky header, content zone, footer note) is identical on candidate and admin surfaces, so navigation is never re-learned. Each page below it fills the content zone with its own blocks.

```
GLOBAL SHELL — used by every page
+-------------------------------------------------------------------+
| HEADER (sticky, min-h 64px): [GYRS *] Home All-Jobs Skills .. [☰]  |
+-------------------------------------------------------------------+
| CONTENT ZONE (max-w-6xl, white rounded-2xl cards on slate bg)      |
|   -- page blocks plug in here, tables scroll inside cards --      |
+-------------------------------------------------------------------+
| FOOTER NOTE: apply only on board official sites · GYRS takes      |
| no applications and no fees                                       |
+-------------------------------------------------------------------+
```

```
HOME (/)                          | ALL JOBS (/jobs/)
[H1 + trust pill + live count]    | [search | district | sort]
[search: keyword|board|qualif][Go] | sidebar: urgency/board/qualif
[trending pills + boards strip]   | cards: badge advt deadline
[job cards: metrics + View & Apply] | title · grid · [View & Apply]
[eligibility calc + how-it-works] |
DETAIL (/job-detail/?id=..)       | DASHBOARD (/dashboard/)
[badges + H1 + match %]           | KPI row: matched/saved/applied
[metric grid x8]                  | [profile form | CV analyser]
[Apply official][Save][Applied]   | [match-ranked jobs][saved|done]
[tabs: notification|docs|eligib.] |
SKILLS (/skills/)                 | ADMIN (/admin/)
[card: level · time]              | sidebar: dash jobs users apps
[unlocks: job pills] [+ Add]      | filter bar -> KPI x4 -> charts
                                  | tables -> add-job form -> reports
```

> **How to read:** every screenshot page that follows is one of these blocks filled with real data. Nothing sits outside the shell — that is what keeps mobile free of overlaps: one sticky header with a hamburger menu, one content column, tables scrolling inside their cards.

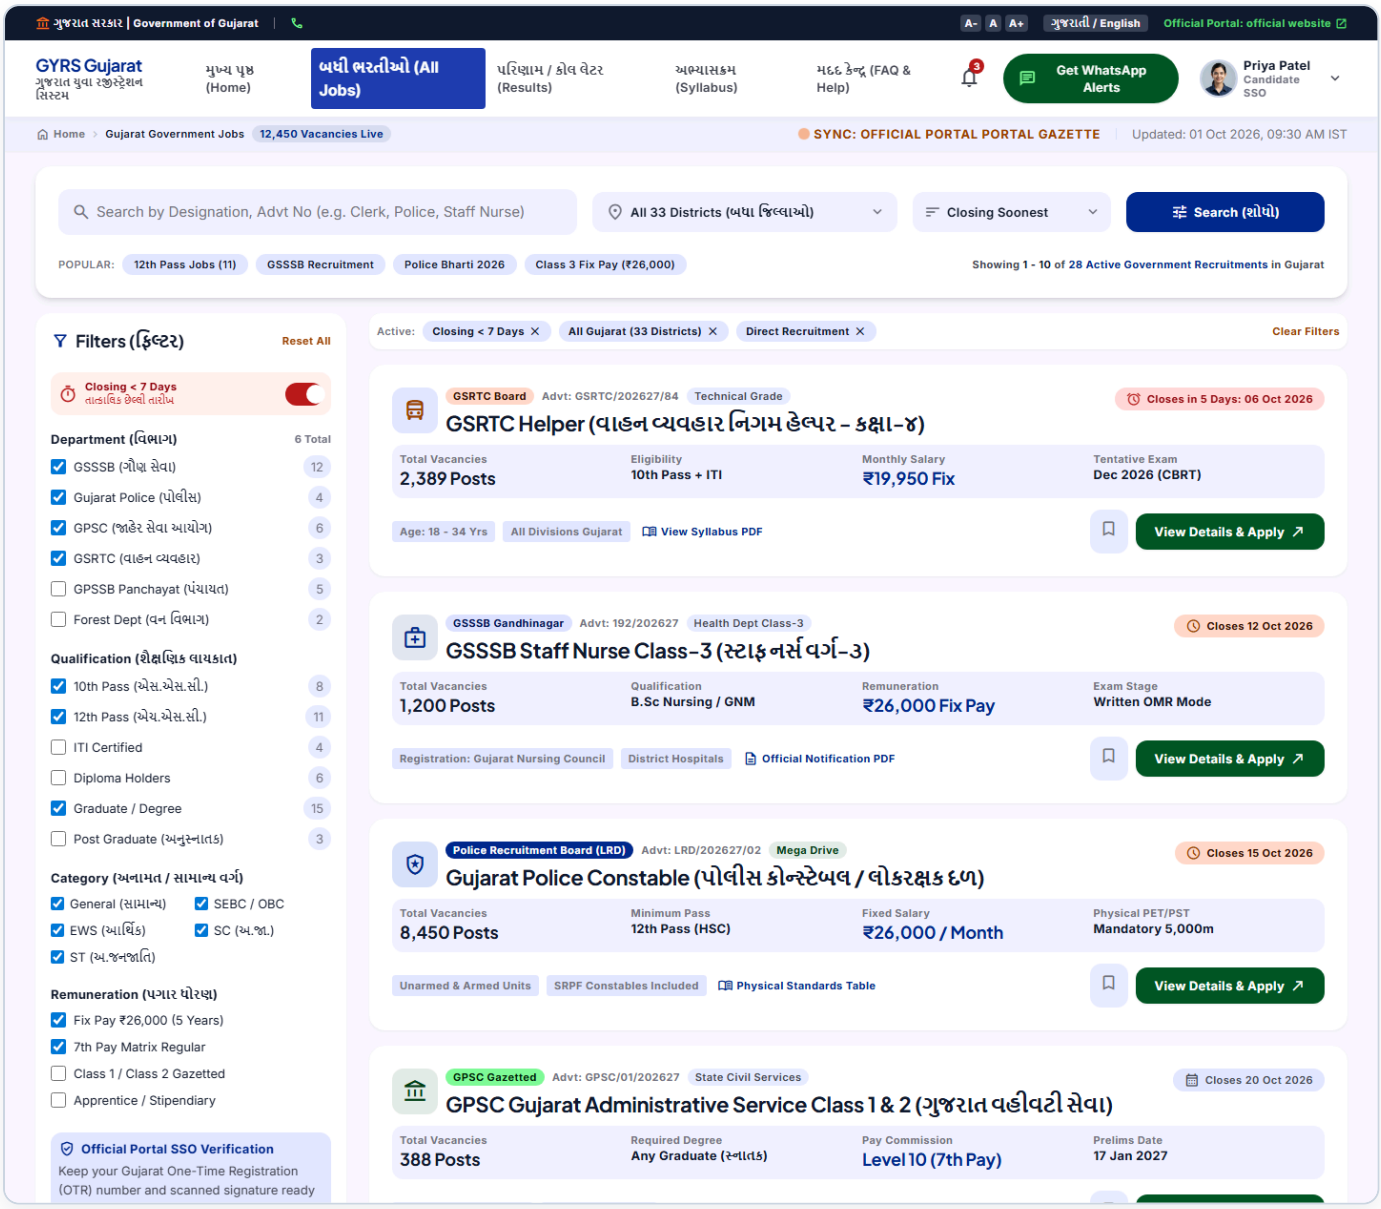

Home — Job Discovery Gateway

What this screen does: Hero with trust pill + live vacancy count, 3-part search (keyword, board, qualification), trending pills, Top Recruitment Boards strip, live job cards with vacancies / salary / eligibility / deadline, eligibility calculator, 3-step how-it-works and live stats.

UX note: One screen answers: what jobs exist, am I eligible, how do I apply. Every card routes inward to its own Job Detail page; the candidate never leaves the portal until the final official Apply click.

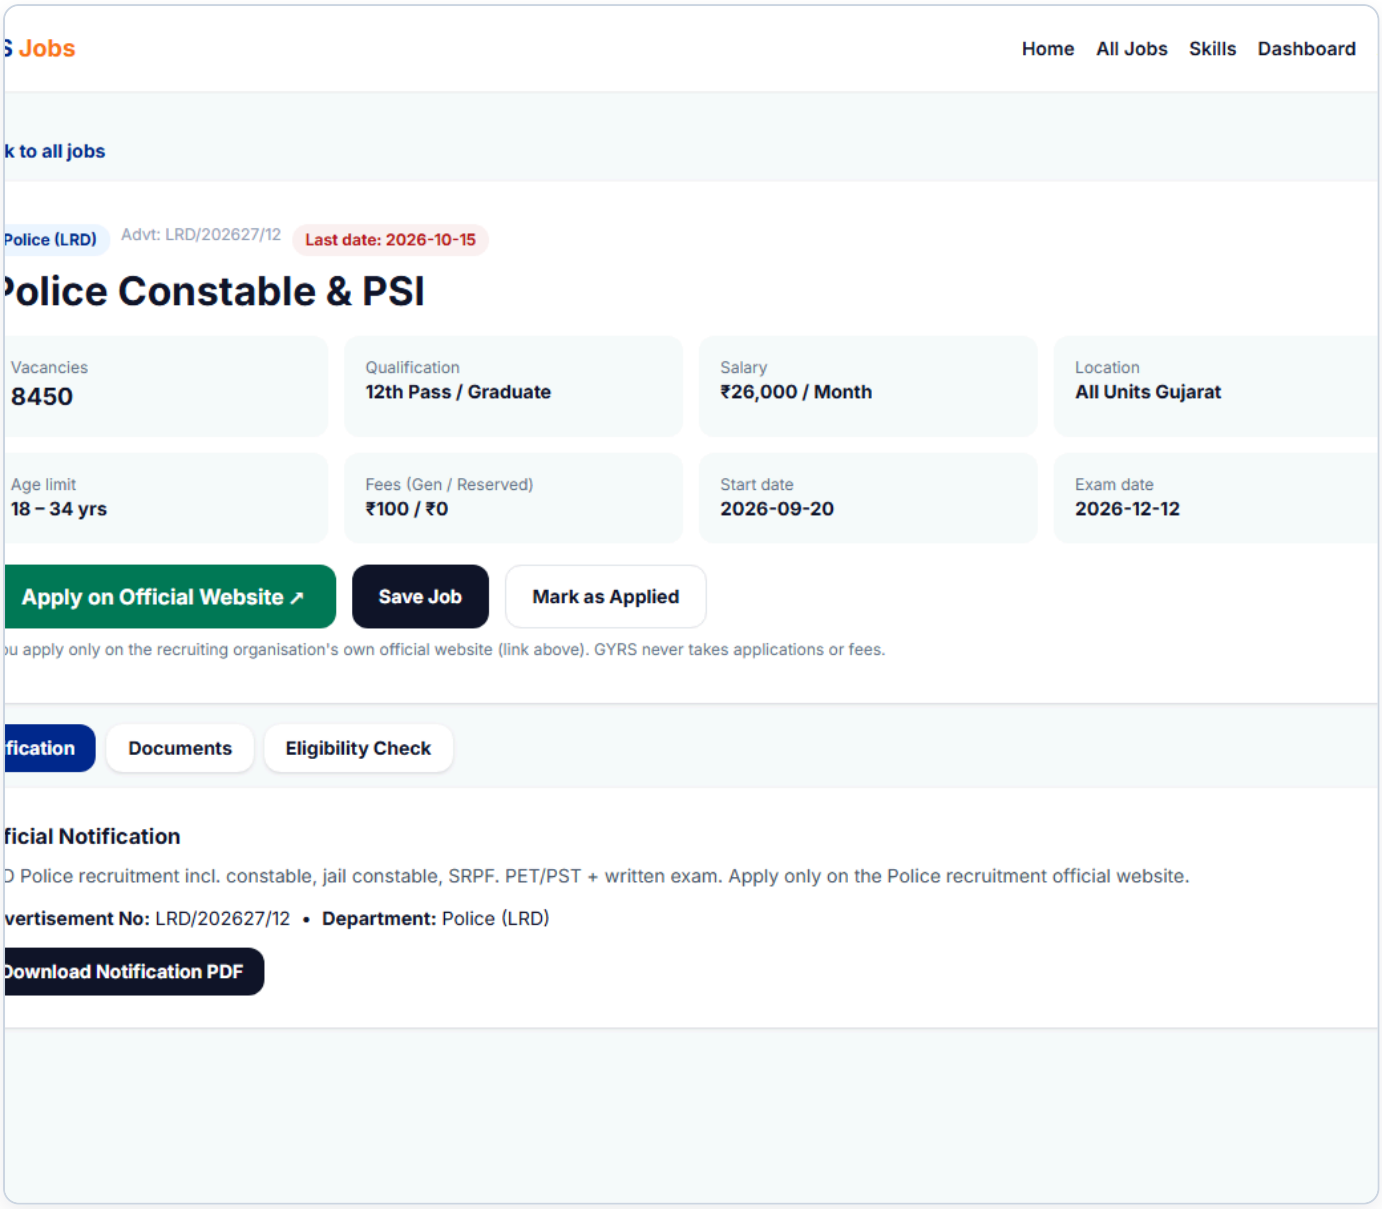

All Jobs — Filterable Listing

What this screen does: Keyword + district + sort bar, popular-filter pills, live result counter, sticky filter sidebar (urgency toggle, board, qualification, category, pay scale), WhatsApp alerts card, rich bilingual job cards with metric matrix and syllabus links.

UX note: Filters narrow results without reload friction; urgency toggle surfaces closing-soon posts first so no deadline is missed.

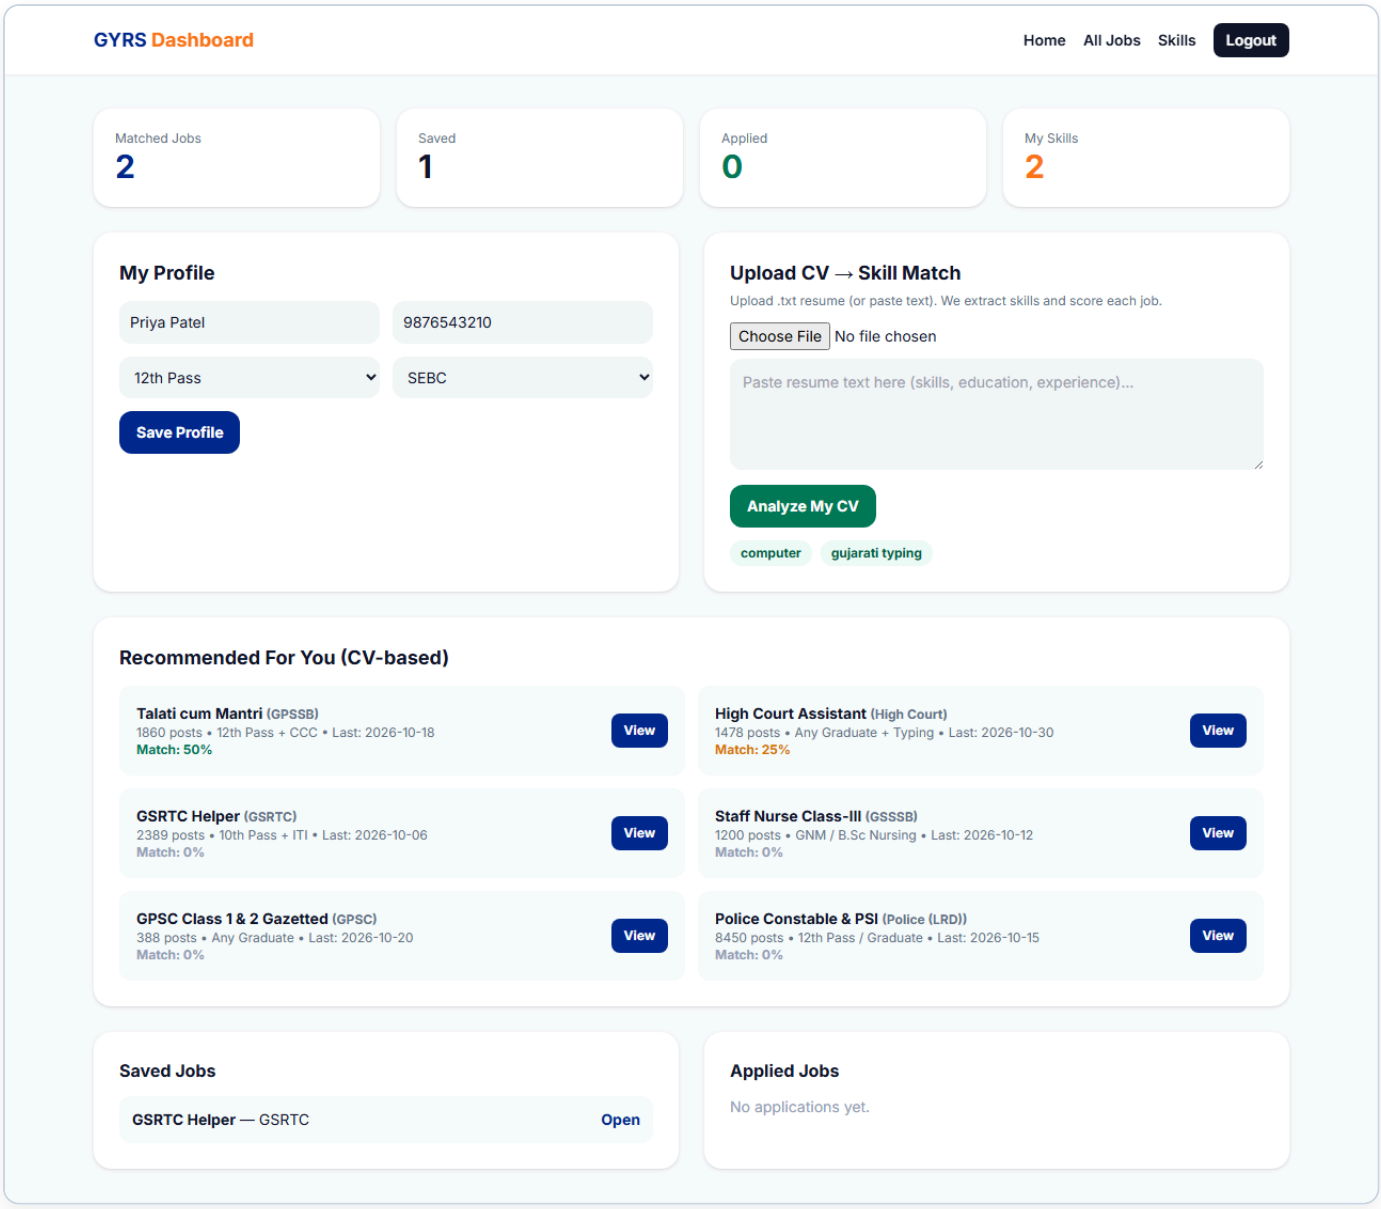

Job Detail — Notification, Documents, Eligibility

What this screen does: Full metric grid (vacancies, qualification, salary, location, age, fees, dates), match % for logged-in users, Save / Mark-as-Applied, tabbed Notification text + PDF download, Documents checklist, and interactive age/category eligibility checker.

UX note: The single source of truth per recruitment: green Apply button opens only the recruiting board's own official website in a new tab. GYRS never collects applications or fees.

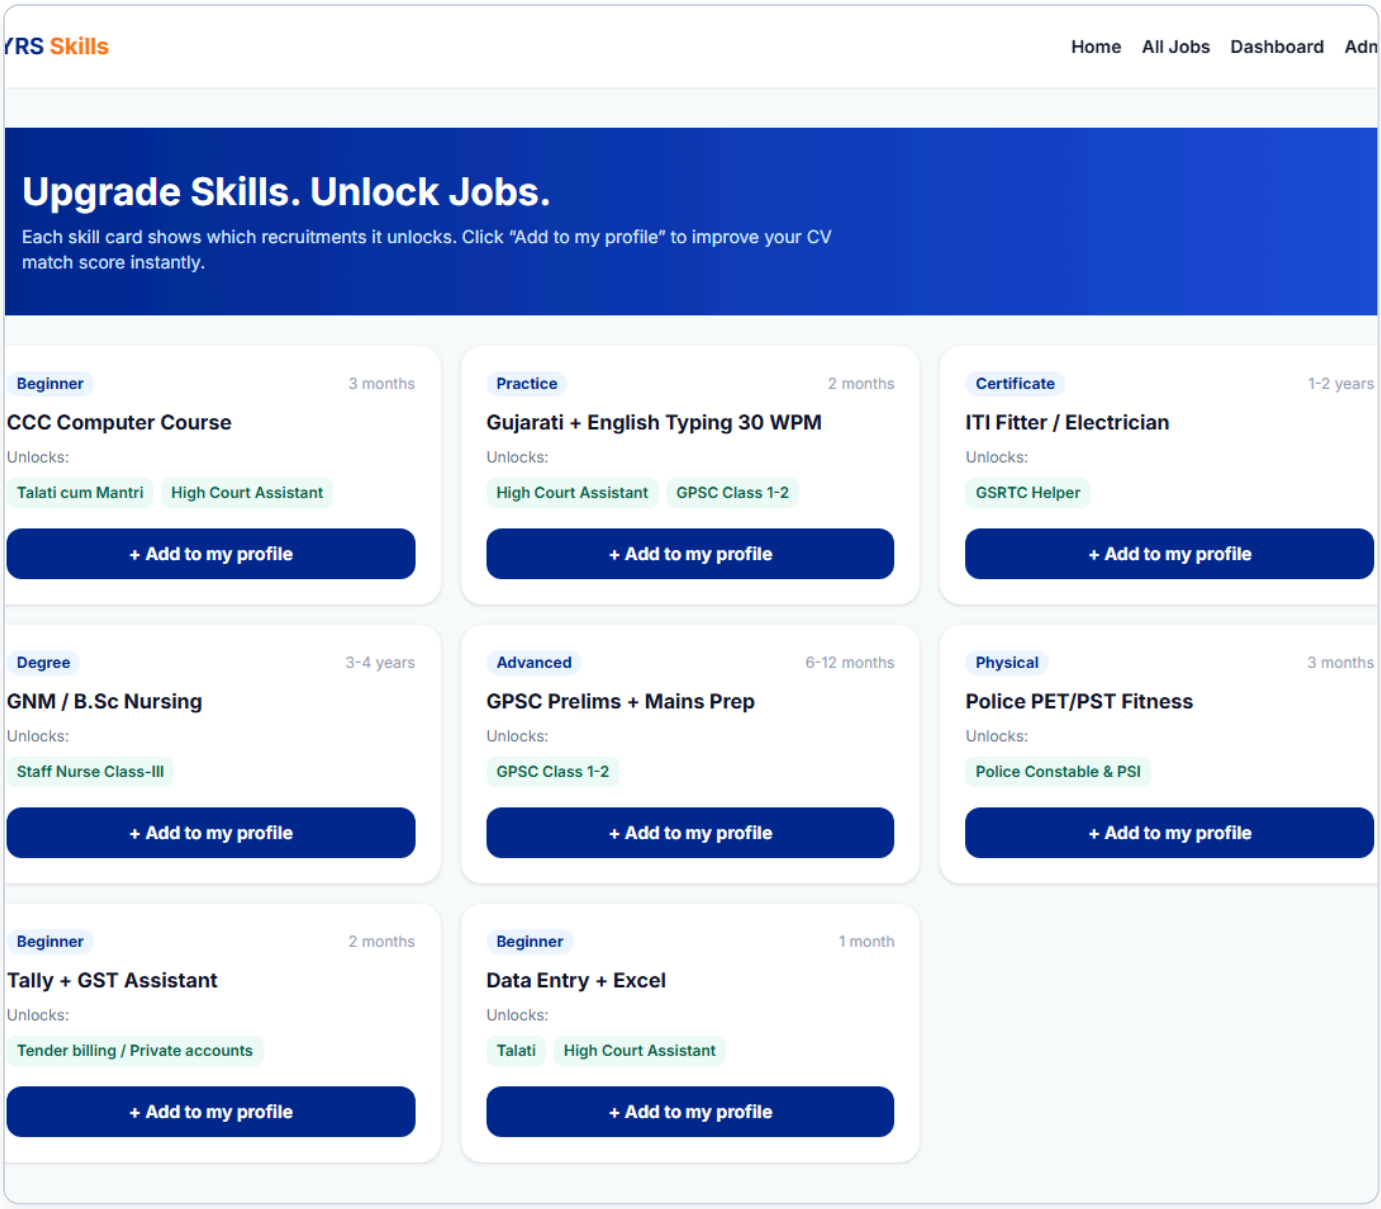

User Dashboard — Profile, CV Match, Tracking

What this screen does: KPI cards (matched / saved / applied / skills), editable profile, CV upload + paste-text skill analyser, CV-scored recommended jobs, saved-jobs and applied-jobs lists.

UX note: Uploading a CV instantly re-scores every job by skill overlap; missing skills point the candidate to the Skills page to unlock more opportunities.

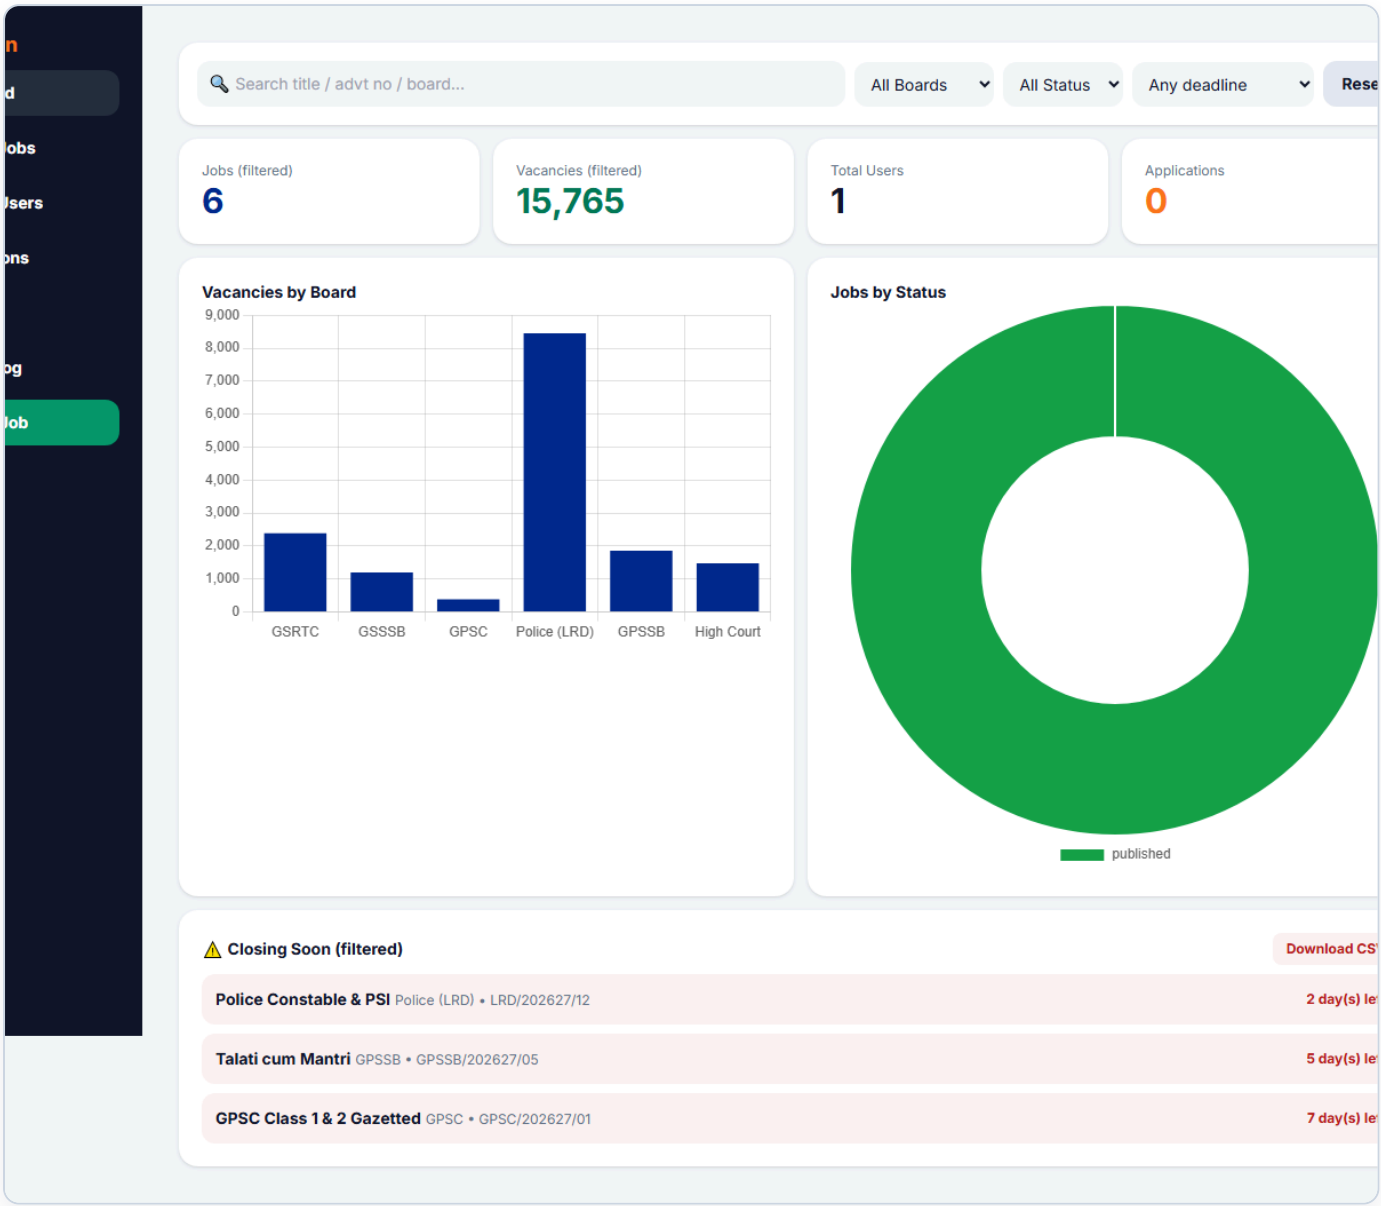

Skills — Upgrade to Unlock Jobs

What this screen does: Catalog cards (CCC, typing, ITI, nursing, GPSC prep, PET fitness, Tally+GST, Excel) each listing the recruitments they unlock, with one-click Add to my profile.

UX note: Closes the loop: a locked job shows which skill unlocks it, and adding the skill immediately raises the dashboard match score.

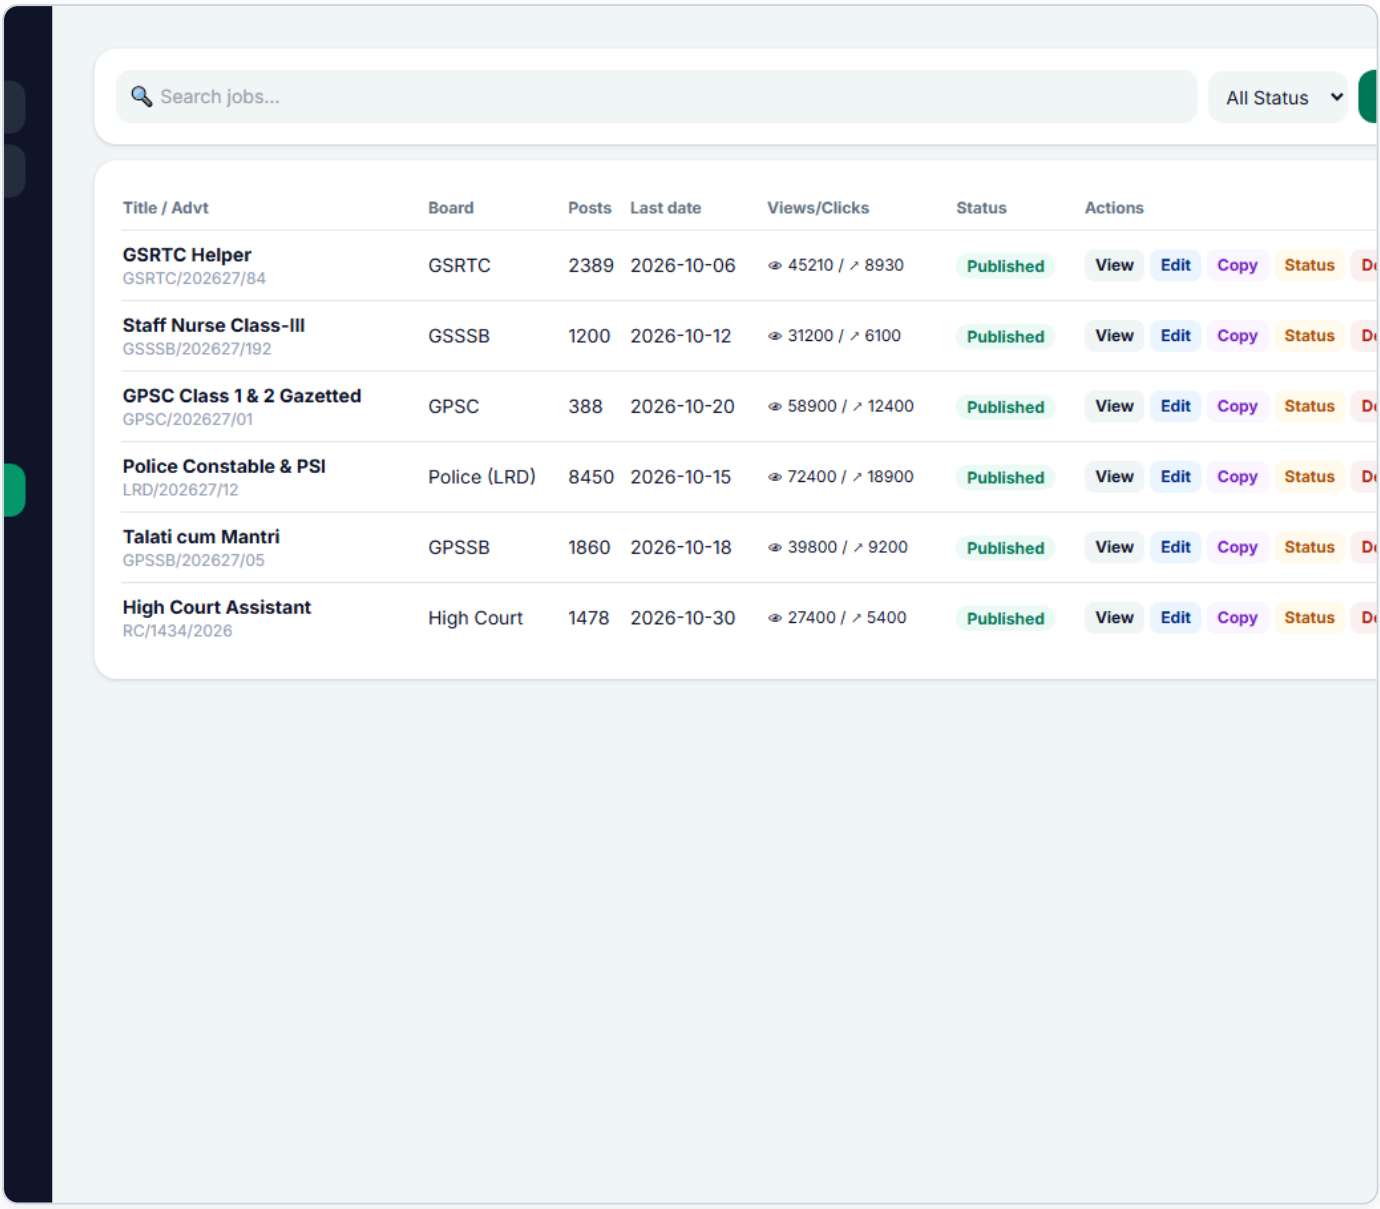

Admin — Dashboard with Filters, Charts, Reports

What this screen does: Global search + board + status + closing-window filters driving KPI cards, vacancies-by-board and jobs-by-status charts, and a closing-soon action list with CSV export.

UX note: Production control room: filter to any slice (e.g. Police + closing in 7 days) and download exactly that slice for reminder campaigns.

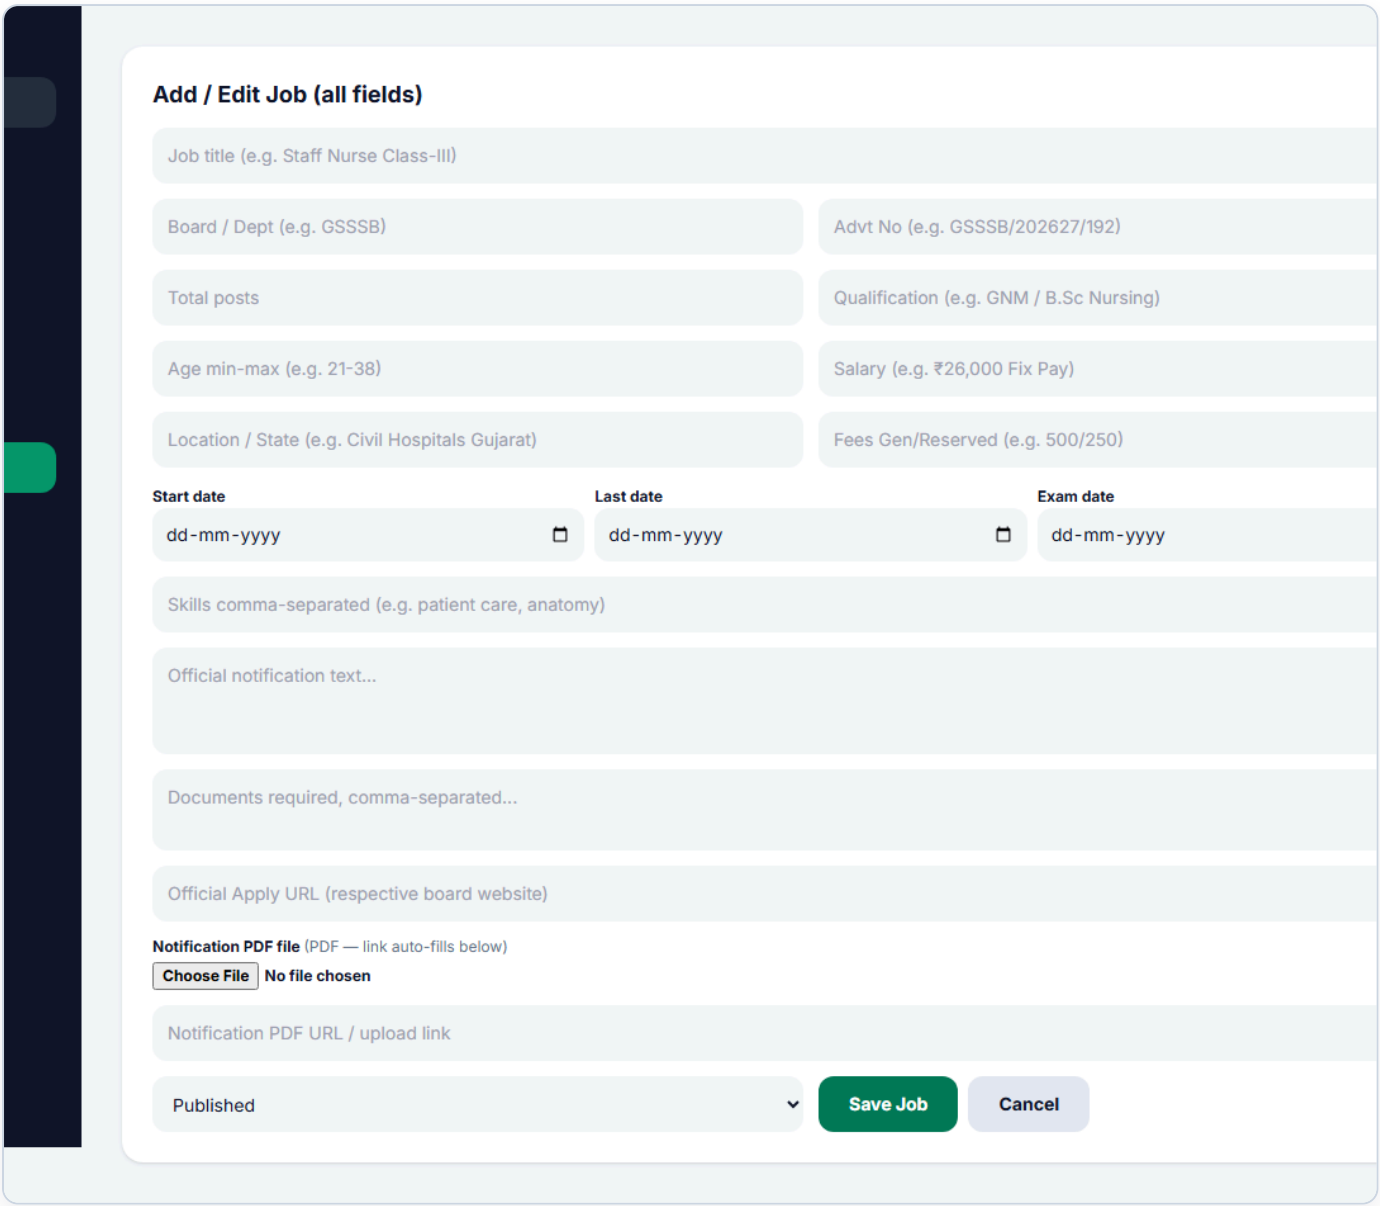

Admin — Manage Jobs

What this screen does: Searchable, status-filterable jobs table with views/clicks telemetry, status pills and per-row View / Edit / Duplicate / Status-toggle / Delete plus one-click jobs CSV export.

UX note: Full lifecycle in one table: draft → publish → close, duplicate repeat recruitments, and audit performance without leaving the page.

Admin — Add / Edit Job (All Fields)

What this screen does: Every field a posting needs: title, board, advt no, posts, qualification, age band, salary, location, fees, start/last/exam dates, skills, notification text, documents checklist, official Apply URL, notification PDF file picker + URL, and publish status.

UX note: Saving publishes instantly to Home, All Jobs and candidate dashboards; every change is written to the Activity Log.

How the portal flows together

1. **Discover** — Home search / All Jobs filters surface the right recruitments with vacancies, salary and deadlines visible up front.
2. **Verify** — Job Detail tabs show the official notification, documents checklist and an eligibility checker before any commitment.
3. **Apply externally** — The green Apply button opens that board's own official website. GYRS never takes applications or fees.
4. **Track & upskill** — Dashboard tracks saved/applied, scores CV skill-match per job, and Skills unlocks blocked opportunities.
5. **Operate** — Admin filters, edits, publishes, exports CSV reports and audits every action in the Activity Log.
